

BOIL WATER ADVISORY
City of Pauls Valley Public Water Supply

Date: March 4, 2026

The City of Pauls Valley is issuing a Precautionary Boil Water Advisory for customers served by the City water system due to water line break, which lowered pressure, and repair to water main, currently under way. Loss of water pressure in the distribution system may allow contaminants to enter the water supply.

All customers served by the City of Pauls Valley water system,

As a precaution, all water used for drinking, cooking, making ice, brushing teeth, or washing food should be brought to a rolling boil for at least one (1) minute and then cooled before use. Bottled water may also be used as an alternative.

This advisory will remain in effect until laboratory testing confirms the water system meets all ODEQ drinking water standards and the advisory is lifted.

The City of Pauls Valley is working diligently to resolve the issue and restore normal water service as quickly as possible.
